Scope of application and purpose

In accordance with the directive 2009/104/EC on the minimum requirements for health and safety and the industrial safety regulation, we, Piller Blowers & Compressors GmbH, are obliged as contractor to protect our employees from harm within our production facilities and during installation tasks at other sites.

The enclosed Declaration of Decontamination 59.9.600.0248 is intended for our information and assurance as contractor concerning the potential contamination of fans, components and parts sent for repair. On the basis of this information, the contractor must be able to take the required protective measures during the execution of repair and maintenance works and the analysis of damage.

Fans, components or parts that arrive at our premises without a correctly completed declaration will be refused and immediately returned to the sender at their cost.

The same stipulations apply to on-site repairs. Similarly, our employees will not commence work unless a correctly completed Declaration of Decontamination is provided. Concerning repairs, our service department must be informed of existing environmental conditions in advance, in order to ensure that employees can be equipped with the necessary personal protective equipment (PPE).

Please find attached the Declaration of Decontamination as a PDF file to download.

Delivery preparation

A Declaration of Decontamination must be completed before sending fans, components or parts in order to ensure that appropriate measures for ADR delivery can be taken.

A copy of the completed Declaration of Decontamination must be included with the delivery documents. Another weather-resistant copy must be attached to the fan, component or part in a clearly visible place.

Before dispatching aggregates, the delivery regulations stipulated in the corresponding operating manual must be observed.

- Equipment disposal
- Ensure all openings are closed airtight.
- Pack correctly.
- Dispatch in the appropriate transport container.
